IN THE CLAIMS

Please amend the claims as follows:

1-23 (Cancelled)

- 24. (New) A piezoelectric actuator for moving and positioning a load, the actuator comprising:
- a piezoelectric body having a plurality of electrodes and a coupling surface which is pressed to a load to friction couple the body to the load; and
- a power supply of crable to electrify at least one electrode of the plurality of electrodes with DC voltage to displace the coupling surface and drag thereby the load to a desired position, which DC voltage the power supply maintains to maintain the load at the desired position.
- 25. (New) A piezoelectric actuator according to claim 24 wherein displacements generated by the DC voltage applied by the power supply are substantially collinear.
- 26. (New) A piezoelectric actuator according to claim 24 wherein the DC voltage is controllable to generate displacements that are not collinear.
